PROUD OF

🏆 Iron Viking Amsterdam 2018

An obstacle course of 42km, which took me about 7 hours to complete.

🏆 80k views

One of my articles recently reached 80k reads on Medium.

🎤 Two conferences

Sharing knowledge as a public speaker is a fantastic experience. I will definitely do more of this in the future.

ABOUT ME

Dieter offers software development and coaching for clients with software applications, who want to create value for their business. With honesty, enthusiasm and knowledge sharing, he makes a difference as a freelancer. He is a real problem solver, who likes to find creative solutions to problems. As a knowledge worker, he focuses on quality work, work on which you can build as a successful organisation.

EXPERIENCE

Software Developer | Dieter Jordens IT Consulting BV

📅 May 2021 – Present

📍 Geetbets, Belgium

- As a young entrepreneur, I have a lot of ambition. I want to make a name for myself by doing good work.
- By starting on my own, I focus mainly on projects that I find interesting myself.
- I want to grow in time, as an individual, but I don't exclude collaborations in the future. I like the idea of building some kind of community of people who like to work together.

Software Developer | Continuum Consulting NV

📅 September 2016 – May 2021

📍 Lummen, Belgium

- Continuum Consulting has been an ideal learning experience.
- The various projects that I have carried out form a good basis, in which I was able to gain a lot of consultancy experience.
- They were very supportive in the very ambitious learning path I took. This is something I will always try to do: keep learning and be open to knowledge.

PROJECTS

Software Developer | Aquafin NV

📅 May 2021 - Present

📍 Aartselaar, Belgium

- Backend development of a software application Rosi: a sewer management application used by municipalities in Belgium.
- Backend development of a software application Levi: an internal application to support the processing of inspection assignments.

Full-stack Developer | FPS Justice

📅 September 2018 - May 2021

📍 Brussels, Belgium

- Leading role in the development of a Document Management System: an application with a CouchDB database that can deal with about any type of document.

- Development of a Chrome Extension with Angular for navigation between applications.
 - Development of a Graph application: linking documents and various entities together
 - The management, development and roll-out of internal applications.
-

Developer | [Ravago](#)

 May 2017 – August 2018

 Arendonk, Belgium

- Leading development role: first experiences as a squad lead and scrum master. The supporting role was a very nice experience for me.
 - Developing and improving a large monolith ERP application.
 - Improvement of the test strategy of the IT department.
 - Creating reports and performing data modifications using SQL.
-

Developer | [Bose](#)

 October 2016 – March 2017

 Maastricht, Netherlands

- Development of a worldwide used B2B consumer portal.
 - A nice combination of Java and front end development.
-

EDUCATION

Master of Engineering: Computer Science, AI | [KU Leuven](#)

 2016

 Leuven, Belgium

- During my master's the focus was mainly on machine learning and AI.
 - The engineer studies were challenging and very diverse: ranging from economics, physics, mathematics to security.
 - My thesis brought together two interests: Machine Learning and soccer.
-

Bachelor of Science: Computer Science, ICT | [UHasselt](#)

 2014

 Diepenbeek, Belgium

- In addition to mathematics and general subjects, I learned a great deal about programming during my studies. The strong personal support made it an ideal learning experience.
- My thesis had a nice social function: Smartphones as Movement Controllers for Motivating Rehabilitation Games.
